

Galvanofforming of micro-structures

- Micro-optics
- Micro-fluidics

LEISTER Microsystems offers high quality electroforms of microstructures for use as mold tools for plastic replication technologies such as injection molding and hot embossing.

Defect free and low stress nickel electroforms are achieved using dedicated equipment and a very precisely controlled electroforming process in a clean-room environment.

With our highly experienced personnel we produce electroforms from a wide range of standard and customer defined substrate geometries.

Please feel free to discuss your particular requirement or application with us.
